

Access Anywhere, Secure Everywhere

Technology support. Troubleshooting. White glove service.

- Server, network, firewall and data storage administration
- Proactive technology sustainment (patch management, maintenance, lifecycle)
- 24/7, 365 support when you need it
- Strategic technology planning
- Information security & assurance

Modern businesses must go where their customers want to be, which means your technology, applications and business process must follow. While the emerging digital economy presents opportunities to grow, it also brings new risks.

Your business does not need to be held hostage by legacy technologies and applications. Similarly, you can provide next generation technology solutions for your workforce while maintaining the security of your data.

Ampersand is your ally and partner in delivering end to end, scalable technology solutions ready for a digital world.

Lead with Strategy

No business can afford to waste resources on failed technology implementations, however few businesses truly align their technology capabilities with overall business strategy. As a result, they find themselves in a never-ending triage cycle, trying to fix yesterday's issues without being able to prepare for tomorrow's opportunities.

Ampersand delivers truly business-aligned technology strategy for our clients by assessing goals, developing measurable outcomes, implementing necessary infrastructure, and providing award winning client support and technical services.

Did you know?

Organizations with between 500 and 1,000 employees have data breach response costs on average of \$3,533 per employee.

Enable Workforce Innovation

We are living in a “Born in the Cloud” world, where mid-career professionals cannot remember a time when cloud enabled technologies for storage, collaboration and analysis were not available. However, these technologies present both new opportunities and new risks which you cannot afford to ignore.

Unsanctioned data storage, rouge applications and the risk of a data breach cannot be ignored. However, we cannot look backwards to the past in solving these challenges of simply “lock it all down”. Instead, we must build technology capabilities to responsibly manage a wide ecosystem of tools, while assuring compliance with both security policy and regulation.

Accelerate Innovation

The challenges ahead will require every business to continually innovate, while driving value and exceptional experiences for their customers. If you try to solve today’s challenges with yesterday’s technologies, you may never realize why your competitors passed you by or your customers moved on.

Ampersand provides solid operational expertise, proactive maintenance, and total sustainment solutions for our client’s technology assets.
